Admin Panel

Purpose of Admin Panel : for Client to view and manage their app, handle complains and enquiries, eg who able to access the app? whats the status of the order? is there any new order since yesterday? our Starbucks voucher gifts runs out i need to deactivate it? We have a new gifts to update, etc etc

(below are some of the features i can think of currently that is needed, based on above purpose, adjust as you see fit)

Admin Management
-- View Admin List : display their info (email, country, level, phone number etc) / edit
------ Edit Admin : edit their basic info or disable their account
------ Create Admin

Country Management (country created here, will be appear as an option country in Admin and Gifts
-- Country list (Enable/Disable)
-- Create Country : CountryName, DeliveryFee

Gifts
-- Gifts list : display Title, Ticket Cost, Photo, (Edit, Deactivate/Activate)
------Edit Gifts (Title, Description, Ticket Cost, Add/Delete Photo)
-- Create Gift (Checkbox Country, Title, Description, Ticket Cost, Add/Delete Photo)

Orders
-- Orders list : display Username, Country, Email, PhoneNumber OrderStatus, TrackingNumber, Price/Token,
-------Order Details (display remaining info inside) : Along with all above , Gift List, Total Weight

Players
-- Player list : display Username, Email, Country, Ticket count, Token count, activate/ deactivate) (Multipage - so your api should not return 1million user data)
-- Search

Games
— List Games
— Edit Games
——— Games respective details (mostly just probability numbers, one with photo) : Jackpot Amount, ItemX Probability, ItemB Probability
